Pro Spot Expands Globally...

As previously announced, Pro Spot International, Inc. just returned from showing at Autopromotec 2009 in Bologna, Italy from May 20-24th. Autopromotec is one of the world's premier exhibitions of equipment and products for the automotive industry. The show consisted of over 14 exhibition halls and 3 outdoor exhibition areas with an incredible range of industry products. Along with demonstrating our products at the show, we received a lot of interest from companies eager to represent Pro Spot International, Inc and our products.

In an effort to expand Pro Spot International, Inc. further globally, we'd like to announce the opening of European offices and warehouses in Sweden, to more efficiently serve our European markets.

Pro Spot International, Inc is making great efforts to expand the company into the many European markets. In addition to our presence at Autopromotec 2009 in Italy, Mr. Olsson was also in Beijing, China this past March to discuss breaking into their market. While in Beijing, Pro Spot International, Inc. put on a training seminar for one of China's largest collision repair franchises, which owns more than 50 dealerships in Beijing. China just surpassed the US as Top Producer of auto sales for 3 consecutive months. In March 2009 alone, 1 million cars were sold. We are consciously evaluating the growing market in China and working to break into it. We're looking forward to a very bright and successful future!
